Brief overview

Experience software developer. Main focus for my career was in the field of ECM technologies.

I later grew a love and passion for .NET, C# and web development.

I have exposure to mountains of different languages and frameworks.

This amount of exposure eventually led me into a team leader position, advising the team on which frameworks to use in which circumstances.

I am still passionate about web development and enjoy building integrations, web apps, single page applications - all of it!

I have minimal exposure to certain frameworks but I can truly fit into any team, any environment, given some time to learn and grow in the position.

I am a real jack of all trades! But truly a master of none.

I am working hard to become a specialist in the line of .NET web development.
